

Sample Diagnostic Shoulder Ultrasound Report: Normal, Complete

Examination: Ultrasound of the Shoulder

Date of Study: March 11, 2017

Patient Name: Juan Atkins

Registration Number: 8675309

History: Shoulder pain, evaluate for rotator cuff abnormality

Findings: No evidence of joint effusion. The biceps brachii long head tendon is normal without tendinosis, tear, tenosynovitis, or subluxation/dislocation. The supraspinatus, infraspinatus, subscapularis, and teres minor tendons are also normal. No subacromial-subdeltoid bursal abnormality and no sonographic evidence for subacromial impingement with dynamic maneuvers. The posterior labrum is unremarkable. Additional focused evaluation at site of maximal symptoms was unrevealing.

Impression: Unremarkable ultrasound examination of the shoulder. No rotator cuff abnormality.
